## Mixing paint and other problems: 3

Look at this ratio for making green paint.

The total number of parts equals nine.
The fraction of yellow parts equals $\frac{6}{9}$ or $\frac{2}{3}$.
The fraction of blue parts equals $\frac{3}{9}$ or $\frac{1}{3}$.
The ratio of yellow parts to blue parts is $6: 3$ or $2: 1$.

You could record that information in a table, like this:

| Number <br> of parts | Fraction of <br> yellow parts | Fraction of <br> blue parts | Number of <br> yellow parts | Number of <br> blue parts | Ratio of <br> yellow to blue |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 9 | $\frac{6}{9}=\frac{2}{3}$ | $\frac{3}{9}=\frac{1}{3}$ | 6 | 3 | $6: 3$ or $2: 1$ |

Here are different ratios for making green paint. Match the diagrams to the ratios and complete the table.

| Number <br> of parts | Fraction of <br> yellow parts | Fraction of <br> blue parts | Number of <br> yellow parts | Number of <br> blue parts | Ratio of <br> yellow to blue |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 |  |  |  |  |  |
| 7 |  |  |  |  |  |
| 5 |  |  |  |  |  |
| 8 |  |  |  |  |  |
| 12 |  |  |  |  |  |
