

Ordering numbers from 0-100

Purpose:

You can help your child to order numbers in the range 0 - 100.

What you need:

- Game board for each player. You can print these or make your own.
- 2 pencils or a collection of counters/buttons.

What to do:

Give each player a game board. The player A calls a number from their board and then crosses it off with a pencil or covers it with a counter/button.

The player B calls a number from their board that is higher than the player A's number.

The round continues until neither player has a higher number to call. Then round two begins with player B calling a number from their game board.

The winner is the first player to cross off or cover all the numbers on their game board.

What to expect your child to do:

- To read all the numbers.
- To call a number higher than the previously called number.

Variation:

- The game is more challenging if the adult player takes jumps in the numbers they are calling.
- The game can be played where the players call a number lower than the number the other player called.
- Design your own game boards with numbers over 100.
